Eyebrow in Face Reconstruction

texture-based eyebrow appearance

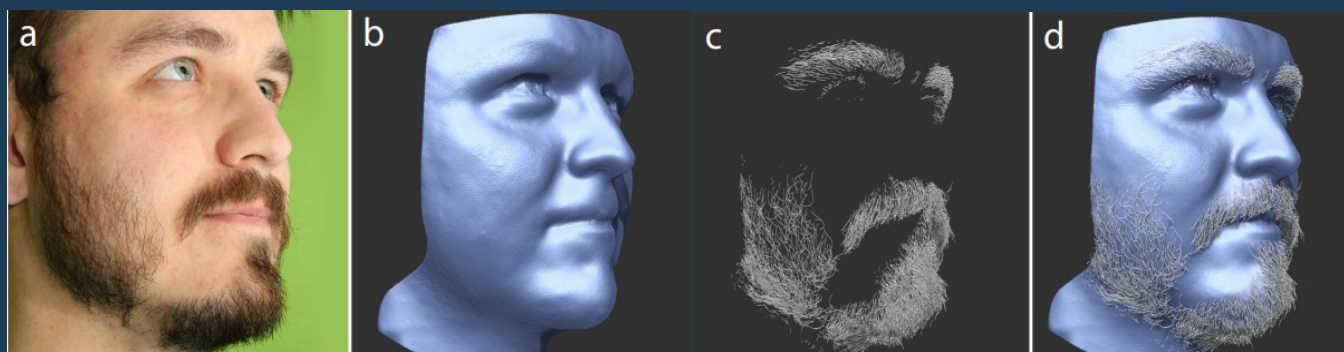

no geometric fiber details

[1] Gecer, Baris, et al. "Ganfit: Generative adversarial network fitting for high fidelity 3d face reconstruction." *Proceedings of the IEEE/CVF conference on computer vision and pattern recognition*. 2019.

[2] An, Sizhe, et al. "PanoHead: Geometry-Aware 3D Full-Head Synthesis in 360deg." *Proceedings of the IEEE/CVF Conference on Computer Vision and Pattern Recognition*. 2023.

Multi-view Facial Hair Capture

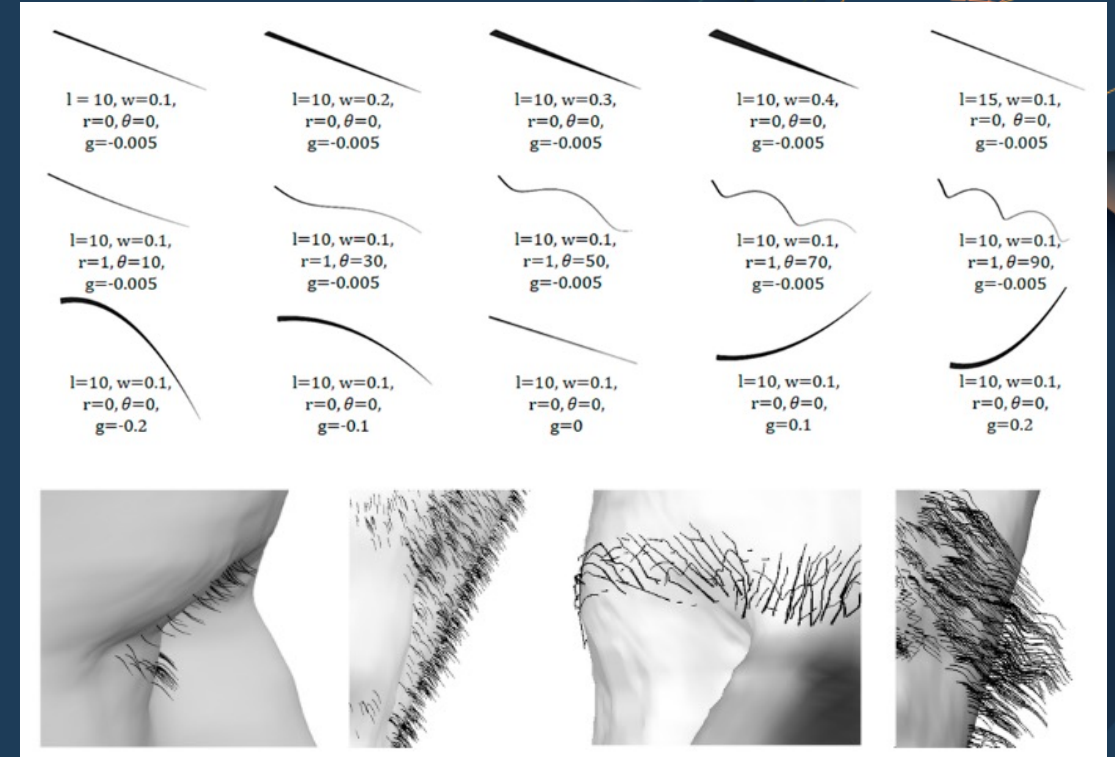

- ✓ high-fidelity captured geometry
- ✗ complex hardware setups

[1] Beeler, Thabo, et al. "Coupled 3D reconstruction of sparse facial hair and skin." *ACM Transactions on Graphics (ToG)* 31.4 (2012): 1-10.

[2] Winberg, Sebastian, et al. "Facial hair tracking for high fidelity performance capture." *ACM Transactions on Graphics (TOG)* 41.4 (2022): 1-12.

Single-input Facial Hair Modeling

✓ statistical priors ✗ texture map needed

✓ frontal-image input

✗ unnatural artifacts

✗ ambiguity by self-occlusion

[1] Herrera, Tomas Lay, et al. "Toward image-based facial hair modeling." Proceedings of the 26th Spring Conference on Computer Graphics. 2010.

[2] Rotger, Gemma, et al. "Single view facial hair 3D reconstruction." Pattern Recognition and Image Analysis: 9th Iberian Conference, IbPRIA 2019, Madrid, Spain, July 1–4, 2019, Proceedings.

Learning-based Single-view Scalp Hair Modeling

Reconstruction problem

Curve growing problem

- **Where to start?**
-> Hair root localization
 - **How to grow?**
-> Hair strand representation
 - **When to stop?**
-> Hair strand length determination
- ✓ learned priors from synthetic dataset
 - ✗ no available 3D eyebrow data
 - ✗ not tailor for eyebrow growing pattern

[1] Zhou, Yi, et al. "Hairnet: Single-view hair reconstruction using convolutional neural networks." *Proceedings of the European Conference on Computer Vision (ECCV)*. 2018.

[2] Wu, Keyu, et al. "Neuralhdhair: Automatic high-fidelity hair modeling from a single image using implicit neural representations." *Proceedings of the IEEE/CVF Conference on Computer Vision and Pattern Recognition*. 2022.

Where to start?

Trivial methods

- Pre-sampled roots on brow bone region of a fix number (like scalp hair)
- Directly detect location of roots

Solution: *RootFinder* 😊

Probably enable to
examine root location

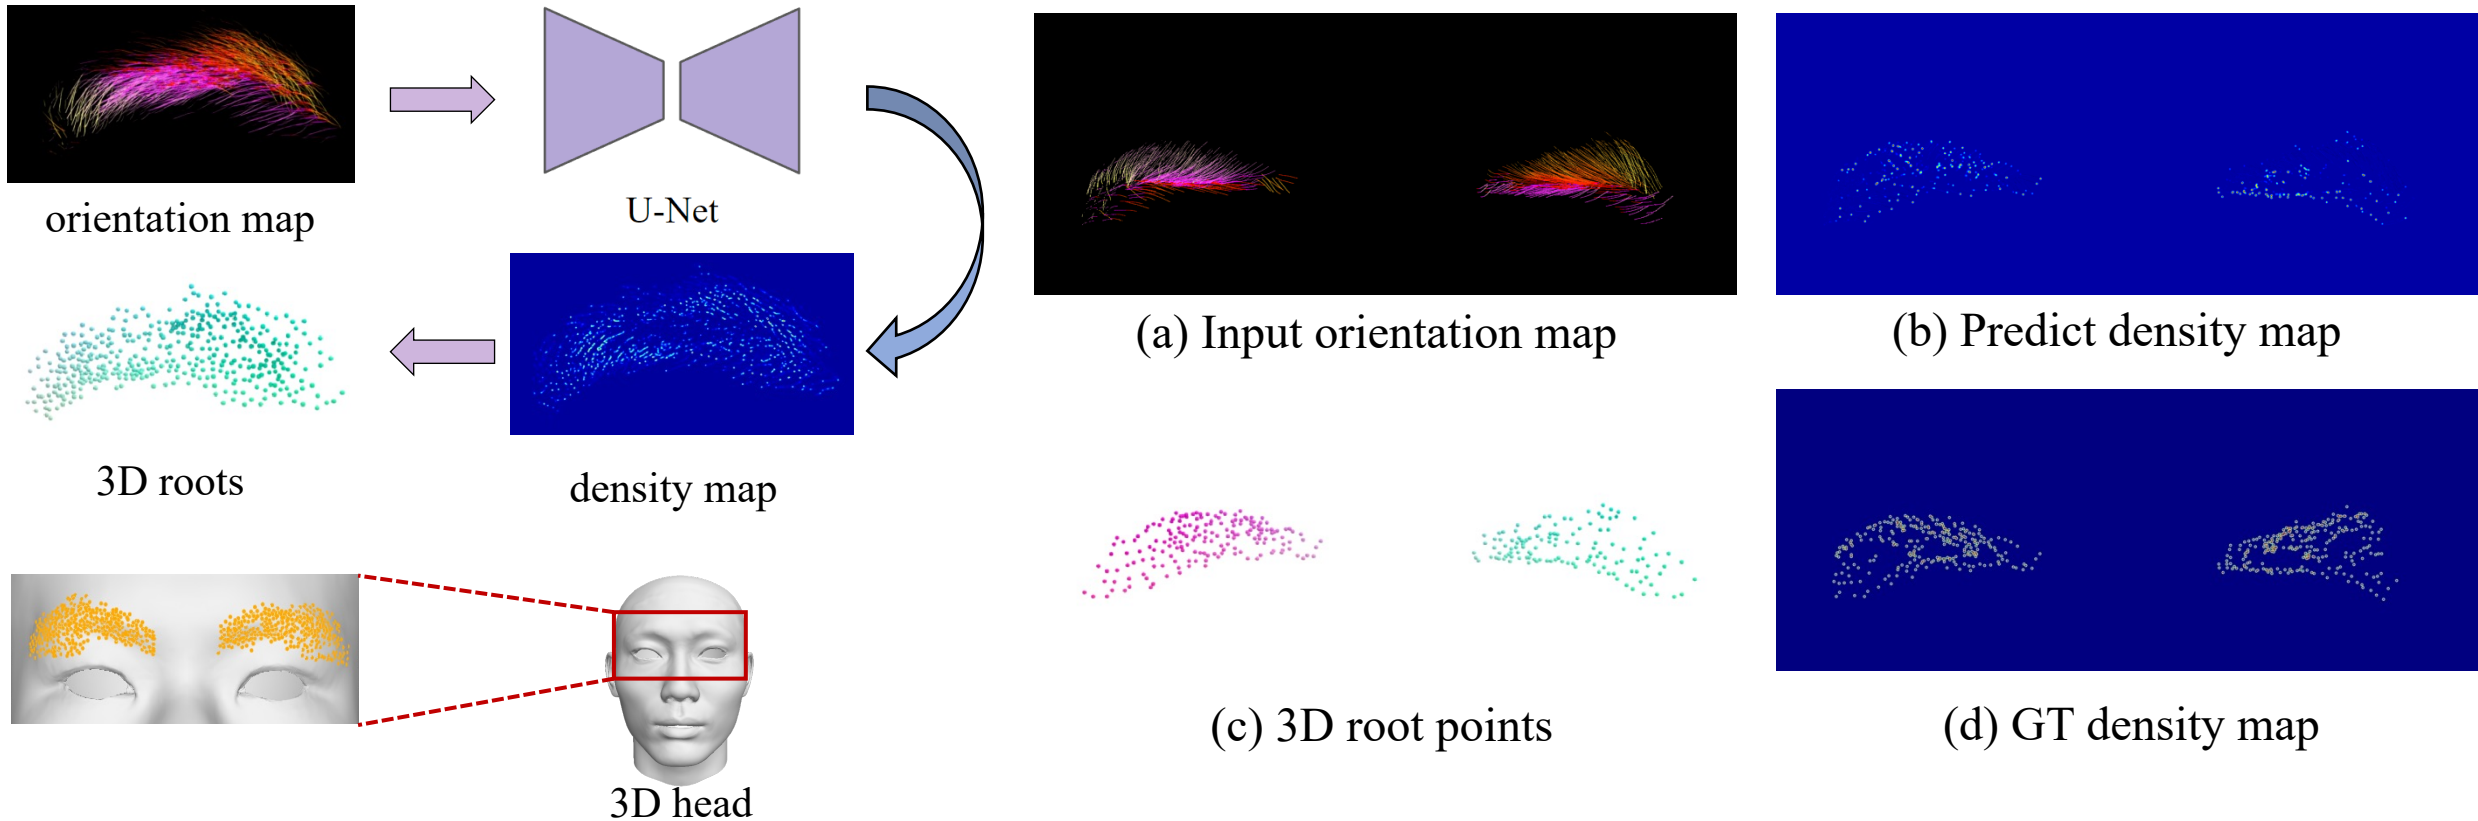

Fail to locate the
exact root!

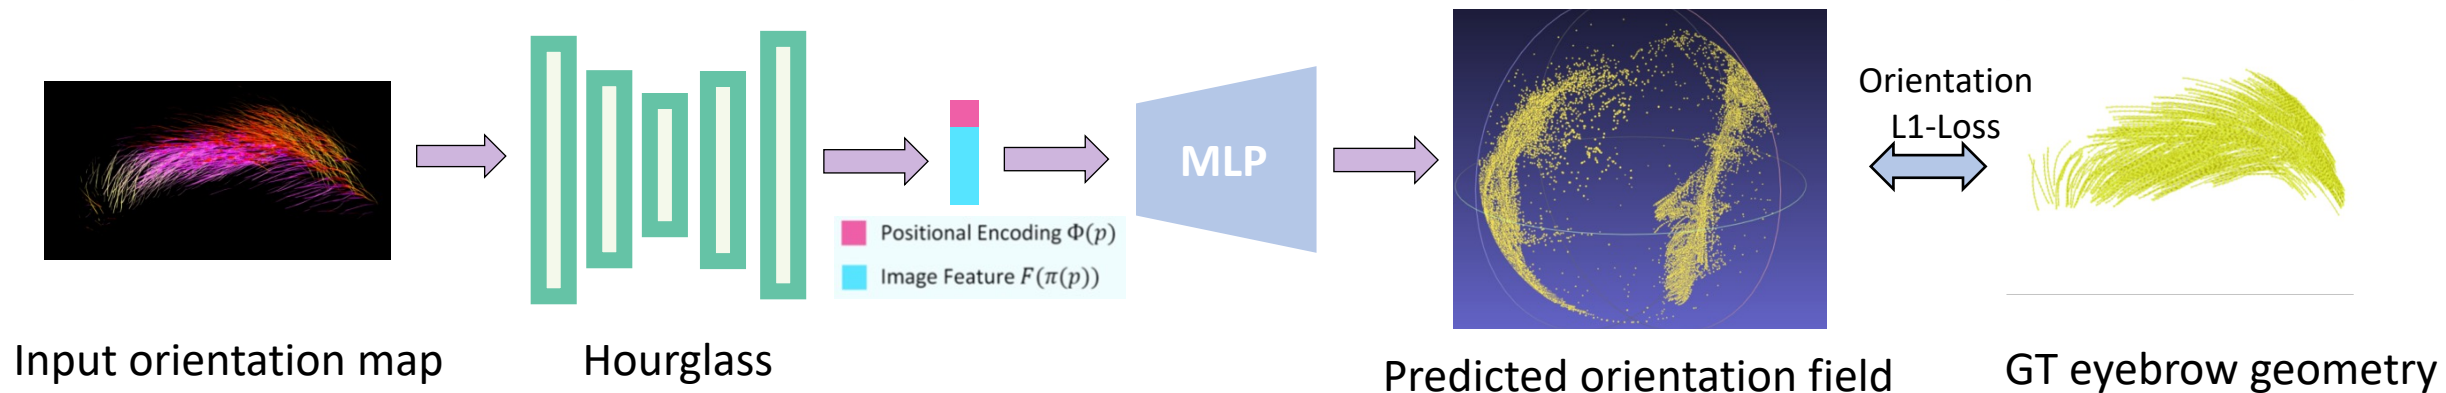

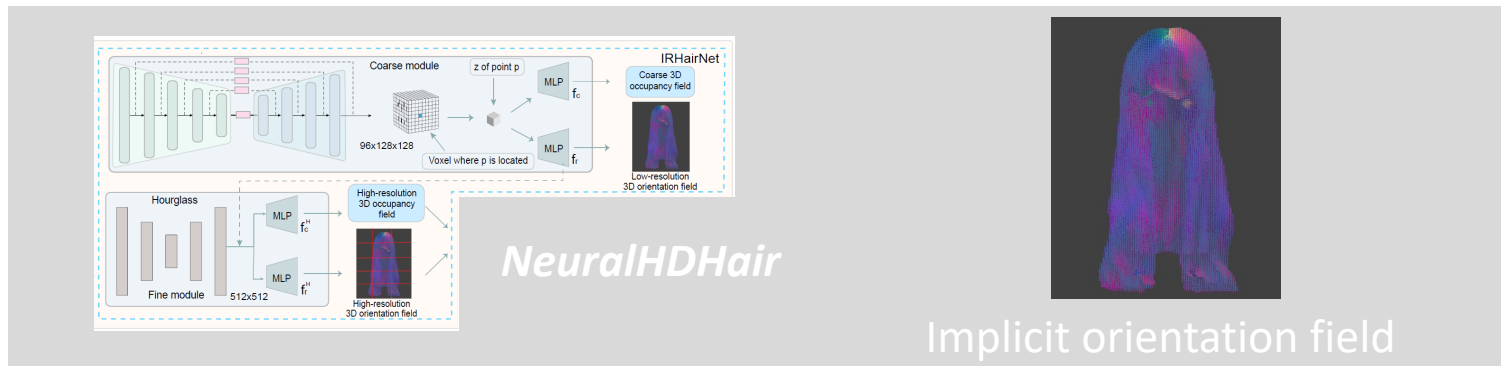

RootFinder: a **density-based** eyebrow root location method

Root localization estimation → Density map prediction

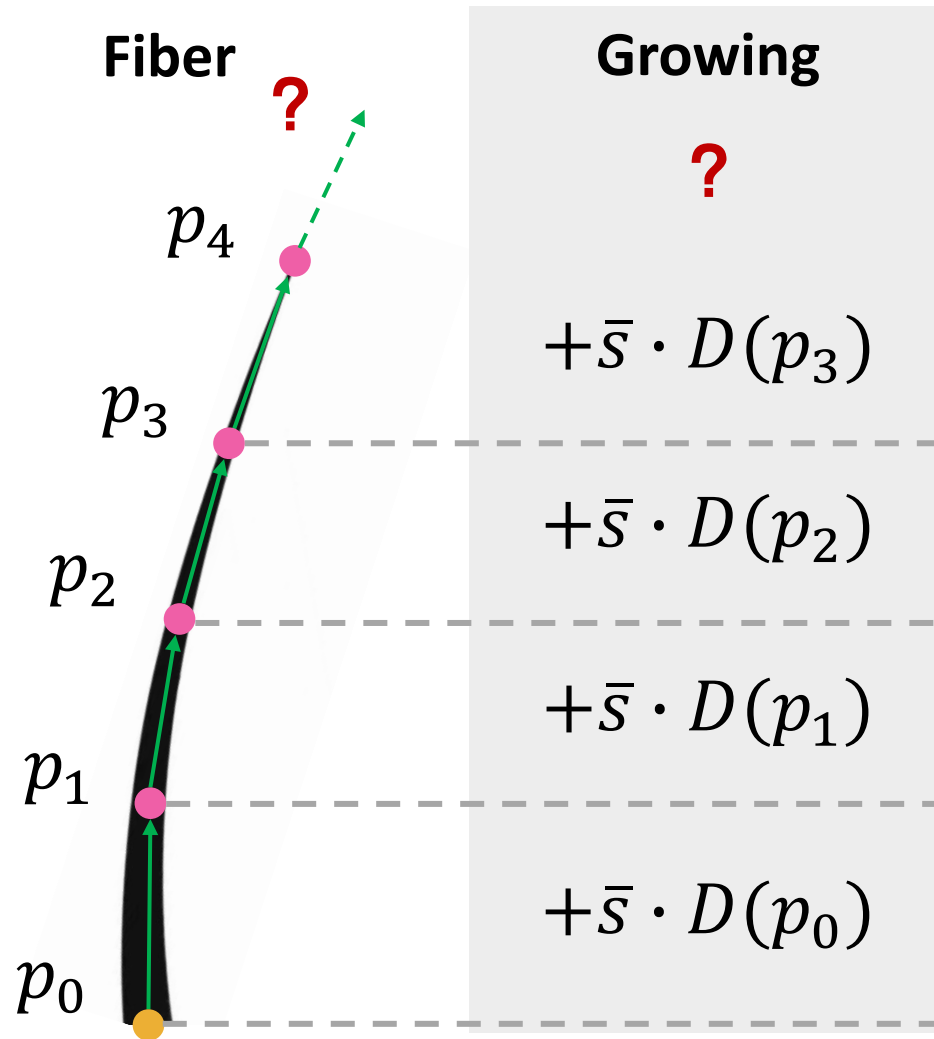

How to grow?

OriPredictor: using **implicit orientation field** to represent growing direction for each fiber

How to grow?

So how to determine whether a growing fiber should end? 🤔

$D(p_i)$: 3D orientation of point p_i
 \bar{s} : a fixed step

When to stop?

Previous methods

- Cut fibers growing outside the predicted coarse mesh (like scalp hair)

Solution: *FiberEnder* 😊

- Eyebrow contour mesh
- ➔ Out-of-plane growing direction
- ➔ In-the-plane growing direction 😞

Smaller scale, need more accurate length control!

Fiber length determination \rightarrow binary classification $L(S) = \begin{cases} 0, & \text{if } S \text{ should be stopped} \\ 1, & \text{otherwise} \end{cases}$

What is possible attributes to a growing fiber?

- Pixel-aligned image feature on orientation map
- 3D position information

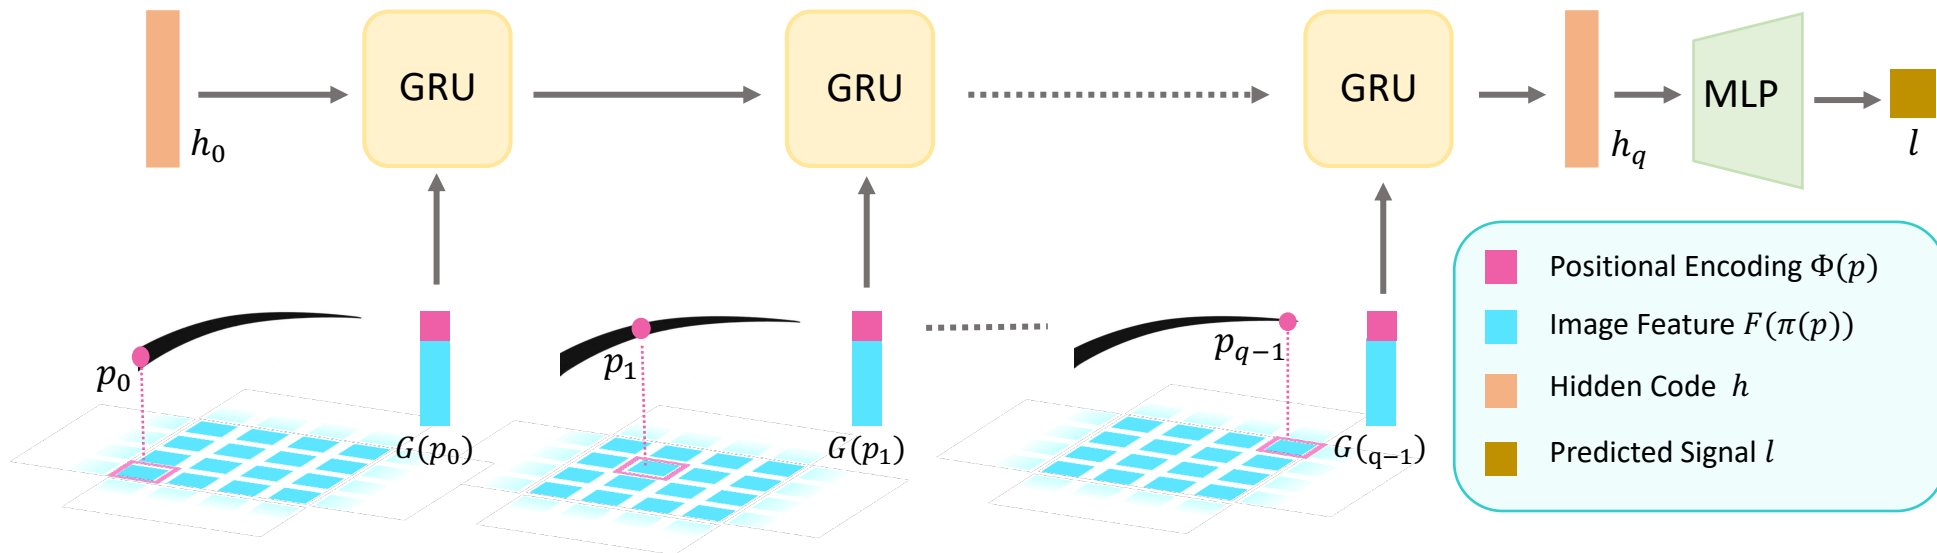

Fiber length determination \rightarrow binary classification $L(S) = \begin{cases} 0, & \text{if } S \text{ should be stopped} \\ 1, & \text{otherwise} \end{cases}$

What is possible attributes to a growing fiber?

- Pixel-aligned image feature on orientation map
- 3D position information
- Historical growing hints

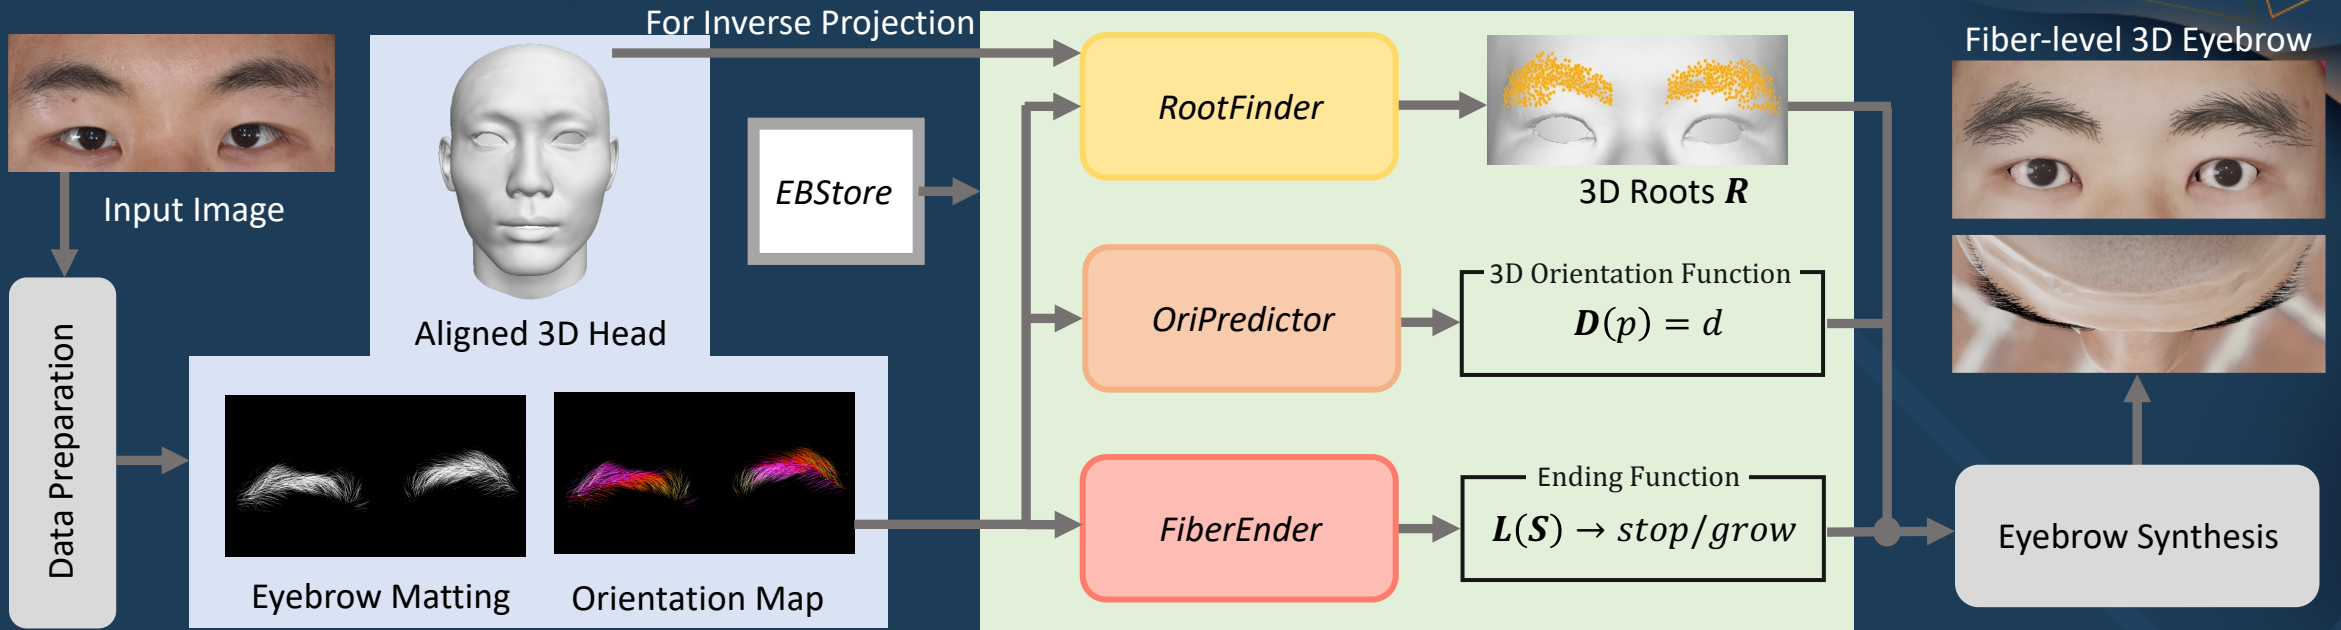

pixel-aligned and stacked RNN-based *FiberEnder*

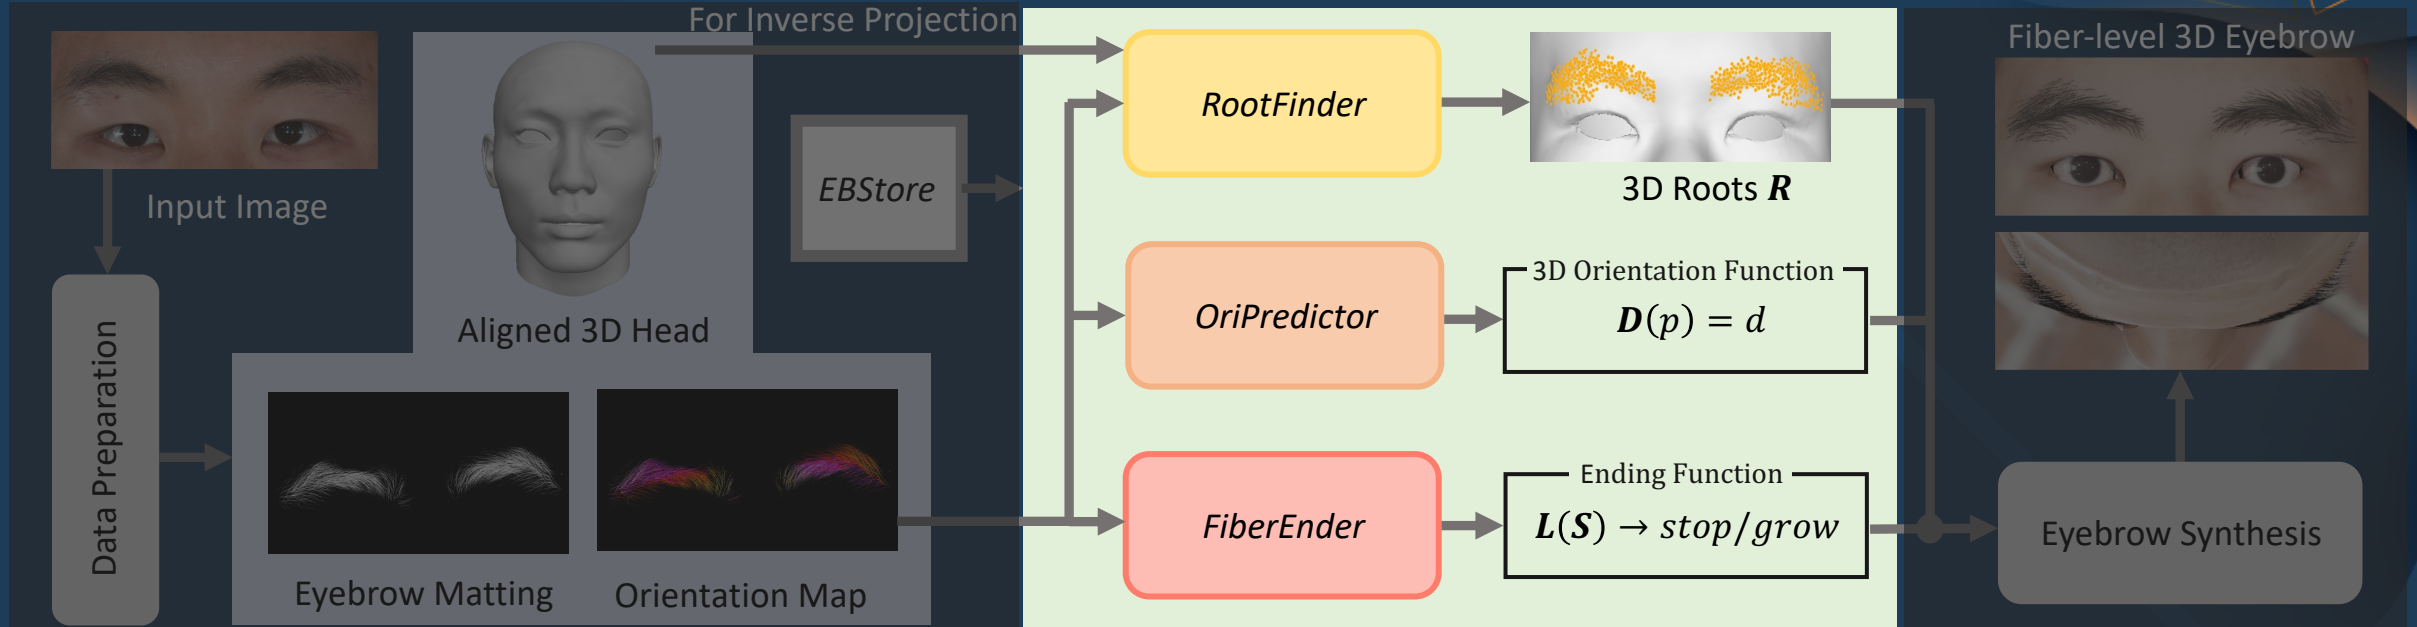

Eyebrow Synthesis

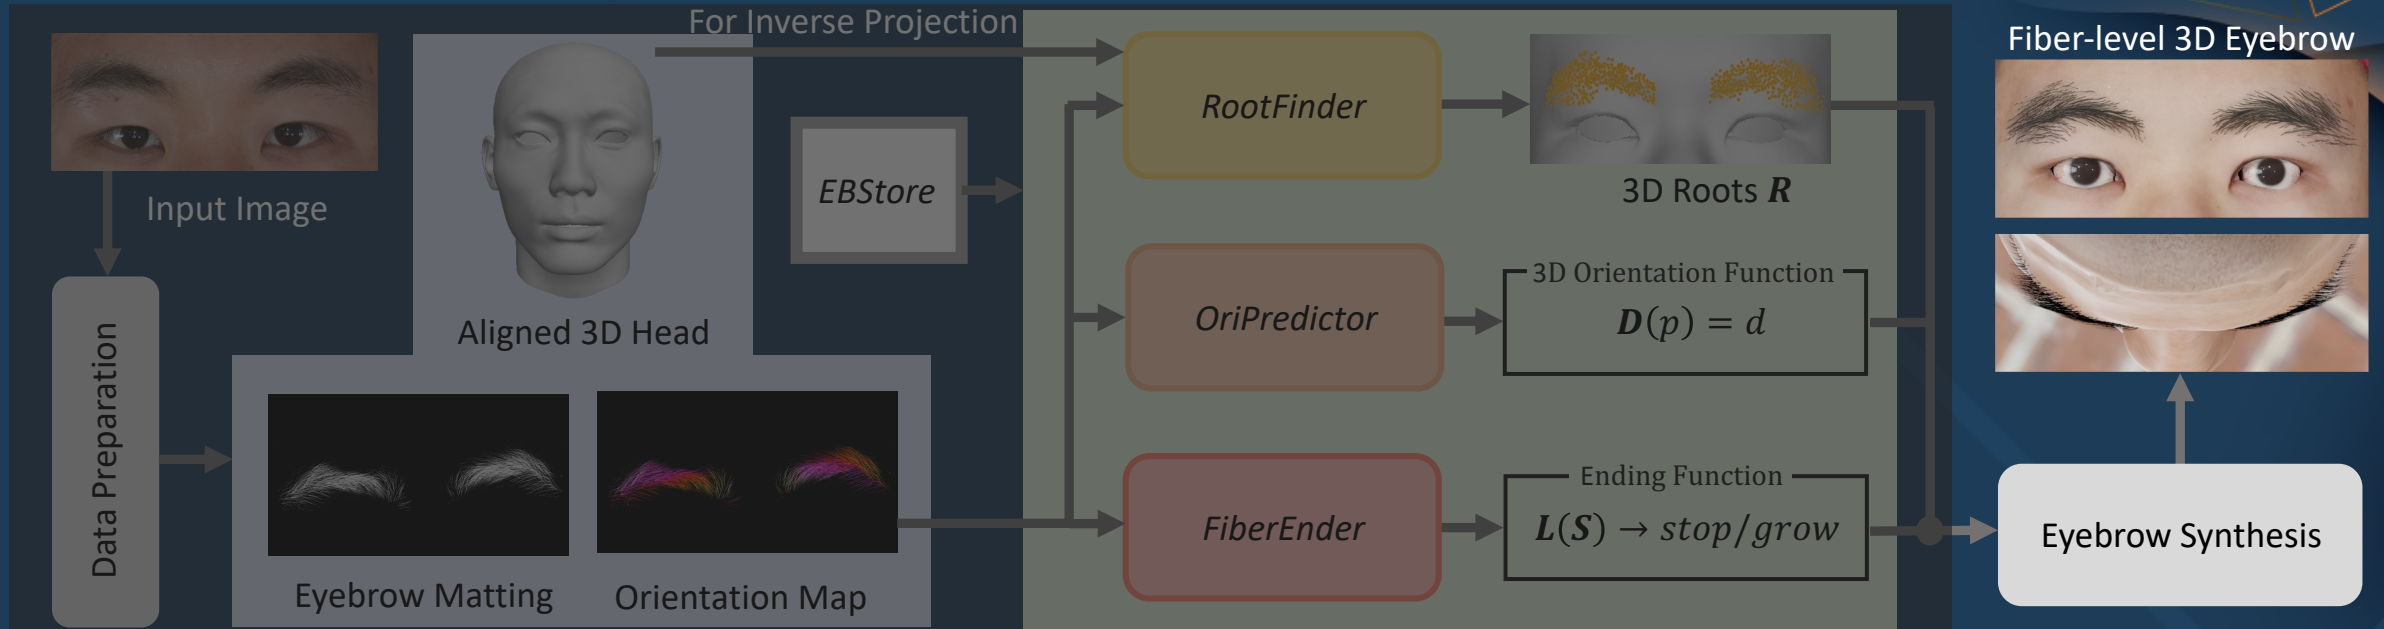

Pipeline

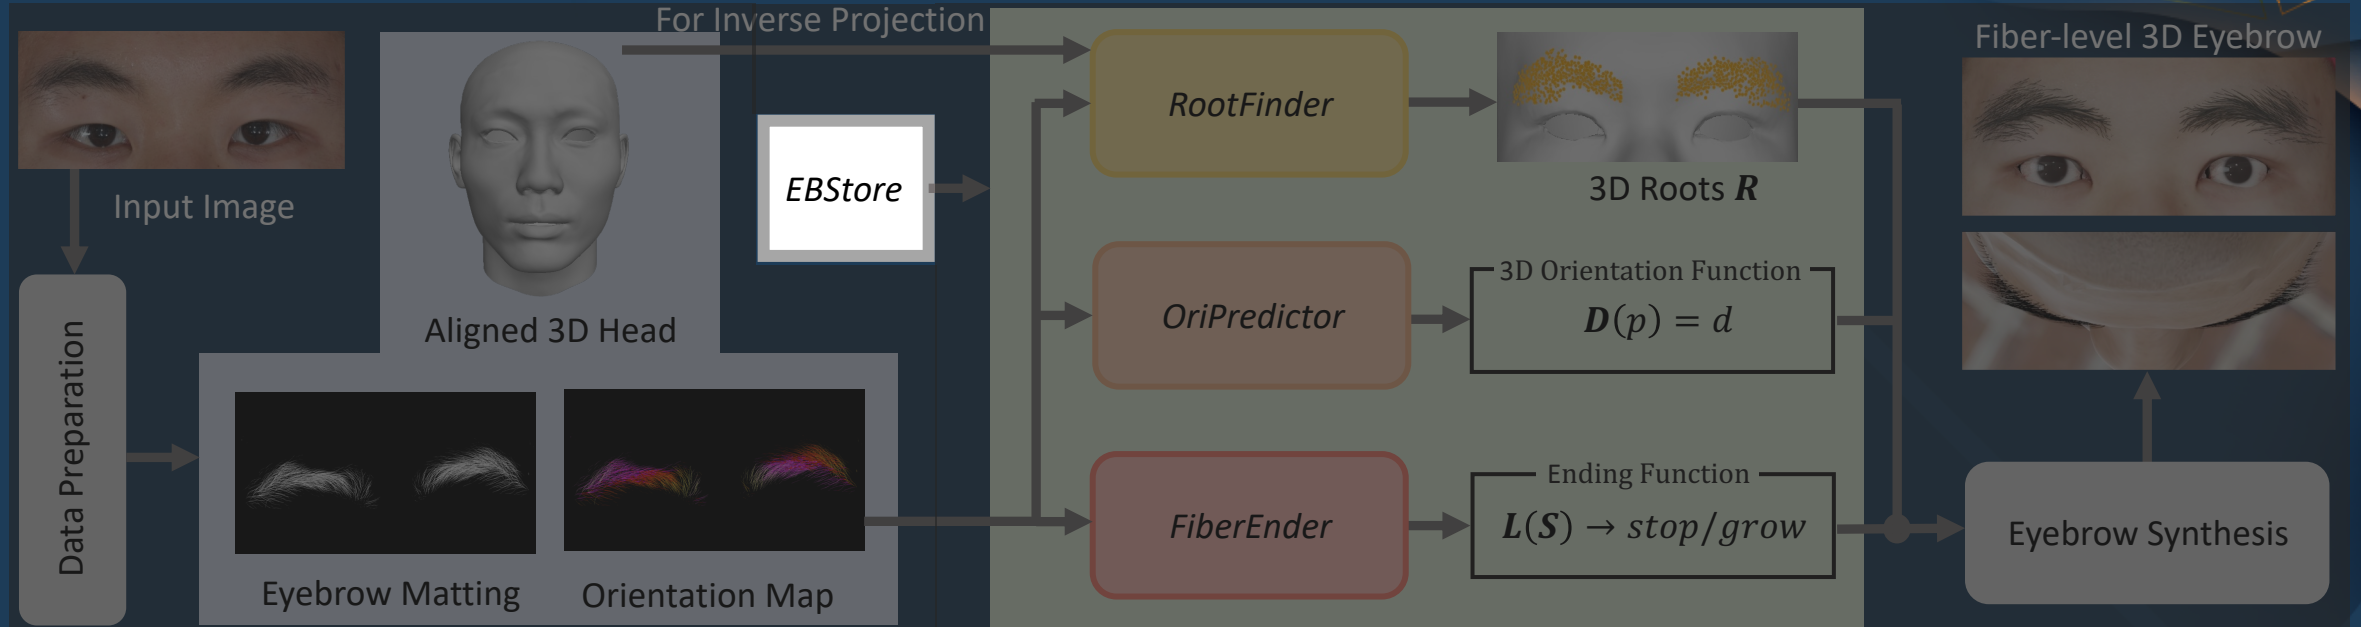

Pipeline

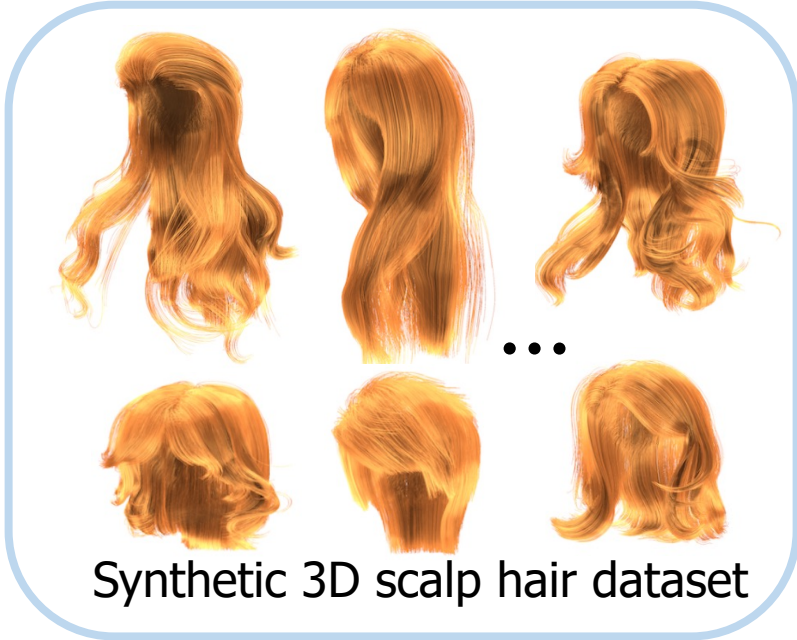

Pipeline

Pipeline

Synthetic 3D scalp hair dataset

Hard to collect 3D 
model from Internet

EBStore Dataset: the **first** 3D synthetic eyebrow dataset that contains **400 high-quality models** manually created by artists

[1] Hu, Liwen, et al. "Single-view hair modeling using a hairstyle database." *ACM Transactions on Graphics (ToG)* 34.4 (2015): 1-9.
